BSP inlet /ACME outlet Swing Joints						
		ACME SWING JOINTS – A SUPERIOR THREAD Rain Bird Swing Joints with ACME outlet in 1", 1" ¼, 1"½ have many advantages: – Seal is independent of tightening torque – No teflon tape required – Easier to install, very difficult to cross thread – Debris resistant – O-ring helps to “wipe” the sealing surface – Less susceptible to damage from frost heave

		<p>New Rain Bird series valve boxes</p> <ul style="list-style-type: none"> - Rain Bird's VB Series Valve Boxes combine strength and stability with unique features that save contractors time and money. - Wide flange bases and corrugated sides protect valves by offering maximum durability, compression strength and stability under heavy loads. - Smart lid design with no holes to minimize pest access. - Lids also have beveled edges that minimize the potential for damage from lawn equipment while allowing for easier hand and shovel access. - All black bodies and lids are made from 100 percent recycled materials, making them earth-friendly and LEED compliant. - Pipe-hole knockouts designed to fit with most pipe configurations are built into the sides of the valve box for easy pipe placement with little need for time-consuming, tedious cutting. - The knockouts can be slid back into place to keep backfill dirt from entering the valve box. - For larger and deeper applications, valve box extension models and bottom-to-bottom stacking and interlocking capabilities provide installation flexibility.

Central Control Systems						
		<p>IC SYSTEM: A NEW LEVEL OF PERFORMANCE THE CONTROLLER BUILT INTO THE ROTOR OR THE VALVE.</p> <p>Rain Bird is pleased to announce the launch of a revolutionary new solution to golf course irrigation control with its Integrated Control System™ (IC System). Through the use of an Integrated Control Module (ICM) mounted onto each rotor/valve and a direct link to the course's central control system, this exclusive control platform provides a compelling alternative to decoder systems or satellite controllers.</p> <p>The IC System is a simple yet sophisticated irrigation system built around a new generation of Rain Bird's proven solenoid and satellite technology. In other systems, the controller, rotor or valve and solenoid are separate components. In the IC System they're combined in a single device, the Rain Bird IC Series Rotor or Valve. So simple. Control is built right in. An irrigation system without field controllers. Without Decoders. Without secondary wiring.</p> <p>This is the IC System. This is performance:</p> <ul style="list-style-type: none"> - A less complex system, fewer parts and processes - Easier to install, just two splices - Makes maintenance easier, intelligent troubleshooting and reduced parts inventory - Makes upgrade and expansion easier - Maximizes return on investment, lowers operating costs for installation and maintenance 				

Part Number	Model	English	2012 List Price €	2011 List Price €	2012 vs 2011 %	Discount Cat.
		*PC according to Rain Bird specification: - 3 year warranty next business day on site - Printer, External modem or WiFi adaptor, Uninterruptable power supply - Peripheral and software installation - Remote access software - 1 year off site technical assistance - On site assistance/training				
Go™						
		GO™ SOFTWARE Cirrus™, Nimbus II™, Stratus™ II, Stratus LT™ and GO™ are the Central Control applications that are available to operate with the IC System. The software is used to establish the irrigation system parameters, operate the system and perform troubleshooting tasks GO™ Software is a newly created level of central control software designed only for use with the IC System.
